

Libellula.VISIO

Automatic planning at the highest levels

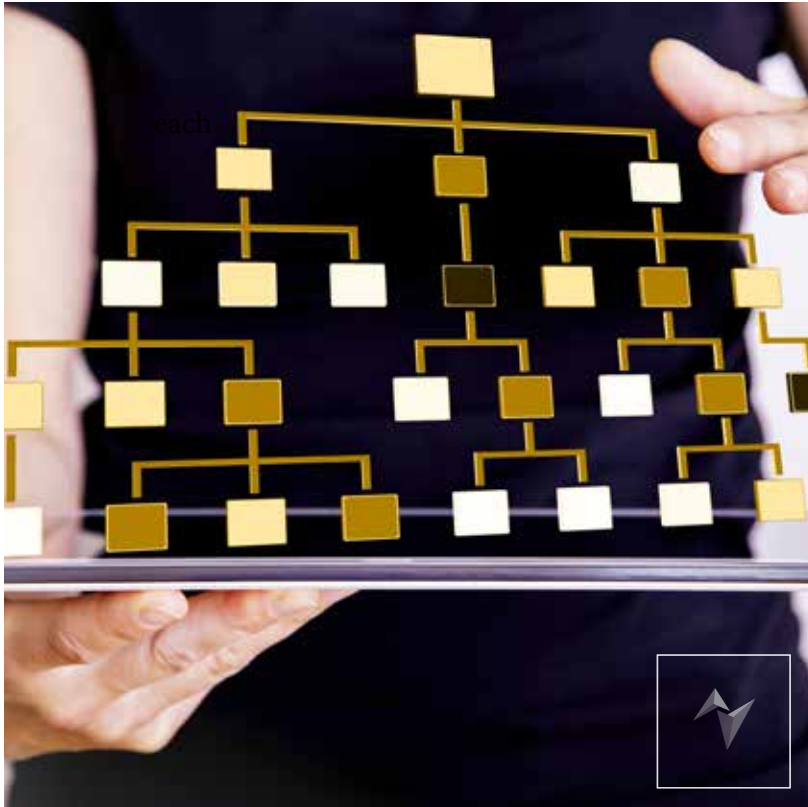

Libellula
Cutting The Edge Of Software Everyday

Software line

Sheet metal cutting

Integration, control, automation: the really 3 in 1 software

Libellula.VISIO is the Libellula Universe software designed for the **planning of all the sheet metal working process which concentrates**, in an intuitive graphical interface, **access to all essential data of business processes**: from the validation of the production to warehouse management up to the Numerical Control of loading and unloading, order status and deadlines.

With Libellula.VISIO you can get the full schedule of processes thanks to a fully integrated **system with Libellula mod.MANAGER**, which sends to the software the queues of programming to be run, allowing the operator to leave the execution order unchanged, or to change the output priority.

Total planning and monitoring of the processes

✦ Full control of the nesting process:

- ✦ Nesting graph examination, scheduled time for its completion and drawings of every details
- ✦ Information on weight, quantity, order number and the customer with respect to each particular program

✦ Production Validation: maximum automation, minimum intervention

At the end of the cycle, the operator merely has to provide the system the information regarding the presence or absence of defective parts and data relating to the quality of the products realized, automatically managing the creation of new pieces or implementing inputs to ensure the improvement of production quality

✦ Warehouse management: real-time monitoring

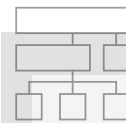

The sheet metal present in the warehouse and necessary to the execution of the processes of nesting is constantly monitored so as to always have a precise calculation of the actual stocks as well as the quantity of scrap usable for subsequent processing

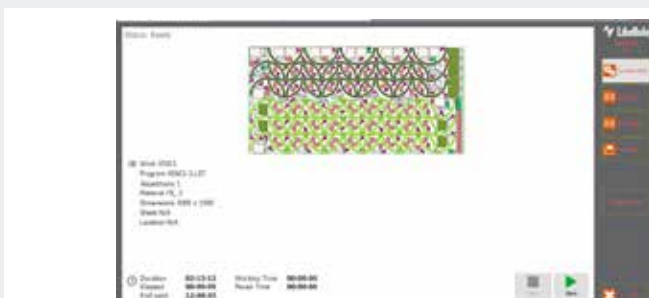

Libellula.VISIO 

MAXIMUM SIMPLIFICATION
OF THE PLANNING FOR
EACH PROCESS

SINGLE INTERFACE FOR THE
MANAGEMENT
OF ALL BUSINESS PRACTICES

Technical features:

- ✔ Execution of the production process
- ✔ Validation of production
- ✔ Warehouse management
- ✔ Direct interface with the numerical control
